No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2, Ap

Sequence 86, Application US/08859954
Patent No. 6083695
GENERAL INFORMATION:
APPLICANT: Hardin, Susan H.
APPLICANT: Hardin, Ramin
APPLICANT: Hardin, Paul B.
TITLE OF INVENTION: Gene Sequencing and Method Thereof
NUMBER OF SEQUENCES: 566
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fulbright & Jaworski L.L.P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel method for sequencing an unknown DNA molecule which comprises selecting a library primer from an octamer oligonucleotide library consisting of 48 B-bp sequences and corresponding complementary consisting of 48 B-bp sequences and corresponding complementary constended where the library primer is complementary to a known sequence where the library primer is complementary to a known sequence to the unknown sequence or is useful for DNA nucleotide sequencing, in PCR, and in other processes which make use of primers. The octamers are used to identify coding sequences. Primer walking the octamer libraries is advantageous over other sequencing methods because it does not require multiple cloning steps nor subsequent template preparations, and it is a directed and methodical approach. AAA80688-A81253 represent the octamer primers used in the primer walking method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequencing an unknown DNA molecule for the polymerase chain reaction and other primer processes comprises primer walking of octamer oligonucleotides

The present invention relates to polymorphic variants of the tumour necrosis factor receptor 1 (TWRR1) gene. The sequence of the gene is given in AAA95102, AAA95103 and AAA95104. The polymorphisms were identified by amplifying and sequencing regions of the gene. Twelve polymorphic loci were discovered. Of these twelve polymorphisms, four can cause a change in the TWR1 protein. The present sequence is the terminal sequence of a primer used for detection of a TWR1 gene polymorphism by primer extension. The TWR1 polymorphisms may be useful for studying the biological function of TWR1 as well as for identifying drugs targeting the protein for treatment of disorders related to its abnormal expression or function such as tumours,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Polynucleotides comprising polymorphic variants of a reference sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for tumour necrosis factor receptor 1 (TNFR1), useful for studying the biological function of TNFR1 and identifying drugs targeting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SAGE tag; serial analysis of gene expression; antigen-presenting cell; APC; monocyte-derived dendritic cell; differential gene expression; immunostimulatory cofactor; costimulatory factor; CTL;
                                                        Primer #12 for detection of TNFR1 polymorphism by primer extension.
                                                                                                   TNFR1; tumour necrosis factor receptor; polymorphism; human; tumour; cancer; apoptosis; bacterial infection; primer; primer extension; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        100.0%; Score 7; DB 21; Length 10; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents an Aloe specific universal PCR primer from the present invention. The present invention describes a method for identifying Aloe using polymerase chain reaction (PCR). The method comprises: (a) extracting DNA from a sample containing Aloe; (b) amplifying the DNA using PCR, and (c) comparing the sequence of the amplified DNA obtained from PCR with the sequence of DNA obtained from a known sample of Aloe. Also described are: (i) a mucleotide sequence comprising sequences given in the specification or a fragment; (2) a method for differentiating between different species of Aloe comprising: (a) extracting DNA from an unknown sample containing Aloe, and (b) amplifying the DNA by PCR using primers specific for a particular species of Aloe, and (3) a method for determining the amount of Aloe present in a mixture comprising: (a) extracting DNA from an unknown sample with internal controls for recovery of DNA, and (b) simulteneous amplification of DNA with primers specific to a particular Aloe species and amplification of non-homologous DNA added to a sample to internally quantify the amplification. The methods can be used for detecting and assaying Aloe in samples and for differentiating between different species of Aloe. The Aloe compounds have diverse biological activities, including anti-tumour activity, anti-acid activity, anti-diang anti-dianeous activity.
                                                                                                                                                                                                   Aloe; detection; indentification; amplification; PCR primer; antioxidant; differentiation; anti-tumour; anti-diabetic; tyrosine inhibiting; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Detection and assay of Aloe - by extraction of DNA from a sample and amplification by polymerase chain reaction using primers specific for Aloe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 expression) tags used to identify mRNA transcripts encoding expression) tags used to identify mRNA transcripts encoding differentially expressed in monocyte advice and encoding immunostimulatory cofactor proteins which are preferentially compared of ifferentially expressed in monocyte derived dendritic cells compared with monocytes. Some of the transcripts correspond to known genes or ESTS (expressed sequence tags) which were previously unknown to be preferentially or differentially expressed in dendritic cells, while ct preferentially or differentially expressed in dendritic cells, while other transcripts correspond to novel genes. Antigen-presenting cells other transcripts correspond to novel genes. Antigen-presenting cells cells. Thus an expense to activation of the cytocoxic immune response, particularly against tumour cells. Thus a robust cytocoxic immune response that can instificient to activate a robust cytocoxic cimmune response that can complex) and subsequent recognition by T-cell receptors also being required for efficient activation of cytocoxic T-lymphocytes (CTB). Nucleic acid sequences identified using the SAGE tags have several potential uses. CT They may be used in vaccines to induce an immune response that modulate the genotype of an APC; to screen compared that modulate expression of differentially expressed genes in complex, and as hybridisation probes/amplaification primers for the complex. All as hybridisation probes/amplaification primers for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated polynucleotides differentially expressed in antigen-presenting cells, useful in gene vaccines against cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page 70; 130pp; English

expression of these genes. Detection of the dendritic cell differentially expressed genes, or of their encoded proteins, can be used to identify cells as belonging to the monocyte lineage. Cells containing these genes can be used in active immunotherapy (or to stimulate production of a population of antigen-specific effector cells) and vectors containing them are used in gene therapy. (or administration of tumour antigens and APC-associated costimulatory factors ensures adequate antigen presentation to endogenous APCs and upregulates the APCs for the presentation of co-stimulatory signals, migration to T cell growth factors and secretion of chemokines for recruitment of immune effector cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SAGE tag, serial analysis of gene expression, antigen-presenting cell, APC; monocyte-derived dendritic cell, differential gene expression; immunostimulatory cofactor; costimulatory factor; CTL; cytotoxic T-lymphocyte; tumour antigen; immunotherapy; anticancer; ss.

                                                                                                                                                                                                                                                       Sequences AA277573-279709 represent SAGE (serial analysis of gene expression) tags used to identify mRNA transcripts encoding immunostimulatory cofactor proteins which are preferentially or differentially expressed in monocyte-derived dendritic cells compared with monocytes. Some of the transcripts correspond to known genes or ESTS (expressed sequence tags) which were previously unknown to be preferentially or differentially expressed in dendritic cells, while cother transcripts correspond to novel genes. Antigen-presenting cell cother transcripts correspond to novel genes. Antigen-presenting cell cother transcripts correspond to novel genes. Antigen-presenting cell cother activation of the cytocoxil immune response, particularly against tumour cells, immunostimulatory coffactors is alone insufficient to activate a robust cytocoxic immune response that can complex) and subsequent recognition by T-cell receptors is alone insufficient to activate a robust cytocoxic T-lymphocytes (CTLS). Nucleic acid for efficient activation of cyclocatic T-lymphocytes (CTLS). Nucleic acid sequences identified using the SAGE tags have several potential uses. They may be used in vaccines to induce an immune response, particularly against a tumour antigen; to modulate the genotype of an APC; to screen for against a tumour antigen; to modulate the genotype of an APC; to screen for an APC; and as hybridisation probes/amplification primers for the dagnosis, prognosis and monitoring of differentially expressed genes. Or of their encoded processed genes to containing of the monocyte lineage. Cells containing them are used in gene therapy. Co-administration of the presentation of antigen special or setting as belonging to the monocyte lineage. Cells containing them are used in gene therapy. Co-administration of containing them are used in gene therapy. Co-administe the presentation of co-stimulatory signals, migration to chemokines for the presentation of co-stimulatory signals, migration of chemokines for the containing them are not an e

transcripts that are preferentially transcribed in the metastatic breast transcripts that are preferentially transcribed in the metastatic breast tumour tissue (i.e. are upregulated in metastatic breast tumour cells).

AAZ83942 to AAZ86677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour cells. These transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic biagnosis is by standard immunoassays or hybridisation/amplification carteactions. Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected sequences, particularly an antigen-encoding sequence for use in gene or cell types, of e.g. therapeutic genes (also ribozymes or antisense sequence), particularly an antigen-encoding sequence for use in gene or cell-based vaccines, for diagnosing breast cancer and for raising useful in vaccines; for diagnosing breast cancer and for raising therapeutic agents. Host cells that produce the polypeptides can be used to expand and isolate populations of educated, antigen-specific immune effecter cells, e.g. cytotoxic T lymphocytes, and these used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated polynucleotides differentially expressed between metastatic and non-metastatic breast cancer cells, useful for diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; metastatic breast tumour tissue; breast cancer; tag; primer;

                                                                                                                                                                                                                                                                                                                                                                                                       AAZ80767 to AAZ83941 represent tags corresponding to distinct transcripts that are preferentially transcribed in the metastatic breast tumour tissue (i.e. are upregulated in metastatic breast tumour cells).

AAZ83942 to AAZ86677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour tissue (i.e. are downregulated in metastatic breast tumour tissue (i.e. are downregulated in metastatic breast tumour tissue (i.e. are downregulated in metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic. Companies is by standard immunoassays or hybridisation/amplification reactions. Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected the transcripts are used to direct expression, in selected cell-based vaccines. Polypeptides encoded by the transcripts are also useful in vaccines; for diagnosing breast cancer and for raising specific antibodies (Ab). Ab are used to detect the polypeptides or as therapeutic agents. Host cells that produce the polypeptides or as therapeutic agents. Host cells that produce the polypeptides or as therapeutic agents. Host cells that produce the polypeptides or as defecter cells, e.g. cytotoxic T lymphocytes, and these used for mmunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         o;

transcripts that are preferentially transcribed in the metastatic breast transcripts that are preferentially transcribed in the metastatic breast tumour tissue (1.e. are upregulated in metastatic breast tumour cells).

AA28342 to AA28667 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour cells). These transcripts are downregulated in metastatic breast tumour cells). These transcripts are downregulated in metastatic breast tumour cells). These transcripts are breast cancer, particularly where metastatic. Diagnosis is by standard immunosasys or hybridiaation/amplification reactions. Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell-based vaccines. For therapeutic genes (also ribozymes or antisense cell-based vaccines) for diagnosing breast cancer and for tasing specific antibodies (Ab). Ab are used to detect the polypeptides or as therapeutic agents. Host cells that produce the polypeptides or as therapeutic agents. Host cells that produce the polypeptides or as therapeutic agents. Boblypetides or antigen-specific immune effecter cells, e.g. cyctoxic T lymphocytes, and these used for ammunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated polynucleotides differentially expressed between metastatic and non-metastatic breast cancer cells, useful for diagnosis, prevention and treatment of cancer -
Human, metastatic breast tumour tissue; breast cancer; tag; primer; non-metastatic breast tumour tissue; gene therapy; anticancer; antimetastatic; vaccine; diagnosis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match 100.0%; Score 7; DB 21; Length 10; Best Local Similarity 100.0%; Pred. ```
The present invention describes an isolated DNA molecule comprising a coding sequence of a yeast gene selected from a group of 745 NORF (not previously assigned open reading frame, or nonamnotated ORF) genes comprising a SAGE (serial analysis of gene expression) tag. Also described are: (1) a method (M1) of using NORF genes to affect the cell cycle comprising a diministering a NORF gene whose expression varies by at least 10% between any two phases of the cell cycle selected from log phase, S phase and G2/M; (2) a method (M2) for screening candidate artifungal drugs comprising: (a) contacting a test substance with a yeast cell; and (b) monitoring expression of a NORF gene whose expression varies as in M1, where a test substance which modifies the expression comprising contacting human DNA with a probe which comprises to require the yeast gene is a candidate antifungal drug; (3) a method (M3) for identifying a candidate drug as a method (M4) for identifying a candidate drug as a method (M4) for identifying a candidate drug as a method (M4) for identifying a candidate drug as a method (M4) for identifying a candidate drug as a candidate drug and monitoring expression in the yeast cell with a candidate drug and monitoring expression in the yeast cell of at least 1 NORF gene whose expression is affected by the class of the cell cycle, the differentially expressed genes may be used as markers of phases of the cell cycle, the cell cycle and for study, monitor and affect phases of the cell cycle, the cell cycle is the cell cycle and for identify candidate drugs which and for a defect the cell cycle, the cell cycle, the cell cycle, the cell cycle is density and end for identify candidate drugs which and a defect the cell cycle, the cell cycle, the cell cycle, the cell cycle is density and end of an end of a cycle, and a condidate drug and end to identify candidate drugs which a cycle, the cell cycle, the cell cycle, the cycle is density to the cycle of the cycle is the cycle of the cycle of the cycle of the cycle of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the cell cycle and for identification of antifungal drugs.

1 to AAF44064 represent SAGE tags used in the exemplification of sent invention. AAF33262 to AAF33267 represent linkers and PCR used in the SAGE method, in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Yeast gene coding sequences comprising NORF genes with serial analysis of gene expression (SAGE) tags, useful for studying, monitoring and affecting phases of the cell cycle -

described are: (1) a method (M1) of using NORF genes to affect the cell described are: (1) a method (M1) of using NORF genes to affect the cell cycle comprising administering a NORF gene whose expression varies by at least 10% between any two phases of the cell cycle selected from log phase, S phase and G2/M; (2) a method (M2) for screening candidate antifungal drugs comprising: (a) contacting a test substance with a cycast cell; and (b) monitoring expression of a NORF gene whose expression of the yeast gene is a candidate antifungal drug; (3) a method (M3) for identifying human genes which are involved in cell cycle cyclession comprising contacting human DNA with a probe which comprises at least 10 contiguous nucleotides of a NORF gene whose expression is a method (M4) for identifying a candidate drug as a lember of a class of drugs having a characteristic effect on gene expression in a yeast cell comprising contacting a yeast cell with a candidate drug and monitoring expression in the yeast cell of at least 10 NORF gene whose expression is affected by the class of drugs. The NORF contacting a yeast cell of at least 10 NORF contacting a yeast cell of at least 10 NORF contacting a yeast cell of a least 10 NORF contacting and monitoring expression in the yeast cell of at least 10 NORF contacting and page NORF contacting and page NORF contacting and page NORF contacting expression is affected by the class of drugs. The NORF contacting and page NORF contacting and page NORF contacting and page NORF contacting expression is affected by the class of drugs. The NORF contacting and page NORF contactin

The methods may be used to identify candidate drugs which affect the cell cycle and for identification of antifungal drugs which affect the cell cycle and for identification of antifungal drugs. ART33268 to AAR4064 represent SAGE tags used in the exemplification of the present invention ART33262 to AAR33267 represent linkes and PCR primers used in the SAGE method, in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Yeast gene coding sequences comprising NORF genes with serial analysis of gene expression (SAGE) tags, useful for studying, monitoring and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an isolated DNA molecule comprising a coding sequence of a yeast gene selected from a group of 745 NORF (not previously assigned open reading frame; or nonannotated ORF) genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 10;

The present invention describes an isolated DNA molecule comprising a coding sequence of a yeast gene selected from a group of 745 NORF (not previously assigned opper reading frame, or nonannocated ORF) genes comprising a SAGE (serial analysis of gene expression) tag. Also described are: (1) a method (M1) of using NORF genes to affect the cell cycle comprising administering a NORF gene whose expression varies by at least 10% between any two phases of the cell cycle selected from log phase, S phase and G3/M; (2) a method (M2) for screening candidate antifungal drugs comprising: (a) contacting a test substance with a versession varies as in M1, where a test substance which modifies the expression of the yeast gene is a candidate antifungal drug; (3) a method (M2) for identifying human genes which are involved in cell cycle progression comprising contacting human DNA with a probe which comprises at least 10 contiguous nucleotides of a NORF gene whose expression varies as in M1; and (4) a method (M4) for identifying a candidate drug as a sin M1; and (4) a method (M4) for identifying a read cell cycle expression in a yeast cell comprising contacting a yeast cell of at least 10 contiguous nucleotides of a NORF gene whose expression varies as in M1; and (4) a method (M4) for identifying a candidate drug as a candidate drug and monitoring expression in the yeast cell comprise confidence of a defect phases of the cell cycle, The method may be used to identify candidate drugs which a ffect the cell cycle and for identification of antifungal drugs which in the present invention. AAP33267 represent linkers and PCR in the present invention. AAP33267 represent linkers and PCR privention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Yeast gene coding sequences comprising NORF genes with serial analysis of gene expression (SAGE) tags, useful for studying, monitoring and affecting phases of the cell cycle -
                                                                                                                                                                                                                                                                                                                                                                    Yeast, Saccharomyces cerevisiae, characterisation, cell cycle, NORF; nor previsously assigned open reading frame, nonannotated ORF; SAGE; serial analysis of gene expression; antifungal; tag; identification; linker; PCR primer; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ouery Match

The present invention describes an isolated DNA molecule comprising a coding sequence of a yeast gene selected from a group of 745 NORF (not previously assigned opper reading frame, or nonannotated ORF) genes comprising a sasigned opper reading frame, or nonannotated ORF) genes comprising a sasigned opper reading frame, or nonannotated ORF) genes comprising a main series of gene whose expression varies by at certain some pases of the cell cycle selected from log phase, S phase and G3/M; (2) a method (M2) for screening candidate comprising; (a) contacting a test substance which a yeast cell; and (b) monitoring expression of a NORF gene whose expression of the yeast gene is a candidate antifungal drugs comprising; (a) contacting a test substance which expression of the yeast gene is a candidate antifungal drug; (3) a method (M3) for identifying human genes which are involved in cell cycle expression of the yeast gene is a candidate antifungal drug; (3) a method (M3) for identifying numan genes which are involved in cell cycle at least 10 contiguous nucleotides of a NORF gene whose expression varies at in M1; and (4) a method (M4) for identifying a candidate drug as a candidate drug as a in M1; and (4) a method (M4) for identifying a candidate drug as a candidate drug as a defidered rug and monitoring expression in the yeast cell of at least 10 NORF gene whose expression is a ffected by the class of the cell cycle, confidere drug and monitoring expression in the yeast cell of at least 10 NORF gene whose expression is a ffected by the class of the cell cycle, confidered may be used to identify candidate drugs which the cell cycle and for identification of antification of the present invention. AAP33267 represent linkers and PCR privention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Yeast gene coding sequences comprising NORF genes with serial analysis of gene expression (SAGE) tags, useful for studying, monitoring and affecting phases of the cell cycle -
                                                                                                                                                                                                                                                                                  Yeast, Saccharomyces cerevisiae; characterisation; cell cycle; NORF; nor previously assigned open reading frame; nonannotated ORF; SAGE; serial analysis of gene expression; antifungal; tag; identification; linker; PCR primer; ds.
                                                                                                                                                                                                                                            Yeast NORF gene SAGE tag oligonucleotide SEQ ID NO:4373.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Velculescu V, Vogelstein B, Kinzler K;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example; Page 156; 419pp; English.

Also comprising a SAGE (serial analysis of gene expression) tag. Also described are: (1) a method (M1) of using NORF genes to affect the cell cycle between any two phases of the cell cycle selected from log phase, S phase and G2/M; (2) a method (M2) for screening candidate antifungal drugs comprising: (a) contacting a test substance with a yeast cell; and (b) monitoring expression of a NORF gene whose expression of the yeast gene is a candidate antifungal drug; (3) a method (M3) for identifying human genes which are involved in cell cycle expression comprising contacting human DNA with a probe which comprises at least 10 contiguous nucleotides of a NORF gene whose expression varies as in M1; and (4) a method (M4) for identifying a candidate drug as a member of a class of drugs having a characteristic effect on gene expression in a yeast cell comprising contacting a yeast cell of at least 1 contiguous mucleotides of a NORF gene whose expression in a yeast cell comprising contacting a yeast cell of the candidate drug and monitoring expression in the yeast cell of at least 1 contiguous mucleotides may be used to study, monitor and affect phases of thugs. The NORF gene whose expression is affected by the class of drugs. The NORF contacting a peace of the cell cycle, the cill cycle and for identification of antifungal drugs.

AAF31268 to AAF44064 represent SAGE tags used in the exemplification of the present invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 253

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-08-961-083-253/c

Sequence 253, Application US/08961083

Sequence 253, Application US/08961083

Patent No. 6159469

GENERAL INFORMATION:

TITLE OF INVENTION: Streptococcus pneumoniae Antigens and Vaccines

NUMBER OF SEQUENCES;

ADDRESSE: Human Genome Sciences, Inc.

STREET: 9410 Key West Avenue

CITY: Rockville

STATE: Maryland

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score 14.2; DB 3; Length 40;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 89, Application US/08766439

Patent No. 592538

GENERAL INFORMATION:
APPLICANT: HAZEL, JAMES WILLIAM
APPLICANT: JENSEN, MARK ANTON
TITLE OF INVENTION: GENERIC MARKERS AND METHODS FOR
TITLE OF INVENTION: MONOCYTOGENES AND LISTERIA
TITLE OF INVENTION: MONOCYTOGENES AND LISTERIA SPP.
TITLE OF SEQUENCES: 110
CORRESPONDENCE ADDRESS:
ADDRESSEE: E. I. DU PONT DE NEMOURS AND COMPANY
Sequence 17, Application US/08766439
Patent No. 5922538
Patent No. 5922538
Patent No. 5922538
Patent No. 5922538
Patent INVENTION:
APPLICANT: JAMES WILLIAM
APPLICANT: JANESN, MARK ANTON
TITLE OF INVENTION: THE DETECTION OF LISTERIA
TITLE OF INVENTION: MONOCYTOGENES AND LISTERIA SPP.

```
was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide Kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gal electrophoresis. Vector DNA was prepared from a derivative of pwna2 (gi[472114] gp][APL19072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Kil0-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (17-UN-2002) Weisshaar B., Max-Planck-Institut fuer Zuechtungsforschung, Carl-von-Linne-Weg 10, Koehn, 50829, Germany This sequence is recovered from the left border of the T-DNA. It indicates an insertion close to or within gene At2g31610. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at:
